Clean, fresh air is the basis of life for plants, animals and people. Even in the industrial sector, environmental air of very low germ content is often a necessity, for example in the storage of raw materials and foodstuffs and during their processing and packaging. UV lamps are used very successfully in these applications, and also for general well-being in hospital/clinic waiting rooms, childcare facilities, and aged-care residentials.

OXIRA units have been designed with expectations of quality air neutralisers; Powerful, Quiet and Efficient. These units are also compact, and are designed for extremely quick filter changes. The FG3 and FH3 are designed with flexibility of mounting. Attractive enough to sit on the floor, desk or shelf. And compact enough to be wall or ceiling mounted.

Australian Designed and Made

FG3 - Germicidal

OXIRA integrates into our units quality german UV tubes, designed specifically for germicidal purposes. Control is provided by sophisticated electronic ballasts, ensuring smooth and lasting operation.

FH3 - Ozone Generating

Ozone has been used frequently to address odours in the air. It occurs naturally in our atmosphere, and is frequently generated by lightning storms. OXIRA employs a special wavelength UV tube to mimic mother-nature . These units are only available to clients with specific uses.

OXIRA partners with Heraeus Noblelight, our supplier of world's best UV tubes. Heraeus, a world class german company with more than 150 years of history.

FG3 **FH3**

IDEAL FOR	Germicidal UV to attack airborne bacteria, germs, viruses.	Special Purpose Only.
AIRFLOW	ONE FAN max 60m3/hr	ONE FAN max 60m3/hr
